Course:  Macroeconomic Issues in Agriculture  
Instructor: Philip Abbott  
Room 576, Krannert Building  
Phone: 494-4274  
E-mail: abbottpc@purdue.edu

Secretary: Linda Klotz  
Room 565, Krannert Building  
Phone: 494-4301  
E-mail: lrklotz@purdue.edu

Class Meeting: Rawls 1071  
MWF 9:30-10:20

Course Objectives:
Macroeconomic events have been critical to the evolution and fortunes of the agricultural sector - in the US and elsewhere. Recent volatility in the dollar exchange rate has coincided with large swings in agricultural commodity prices, driven by the Euro crisis, global recession and recovery, and by differing monetary policy approaches across countries. The Asian Financial Crisis - fundamentally a macroeconomic event - had according to some analysis profoundly changed trends in international commodity markets. Several earlier watershed events in international agricultural markets -- the 1973-74 World Food Crisis, the 1981-2 LDC Debt Crisis and Russian Grain Embargo, and the 1986 G7 Exchange Rate Accord – coincided with major shifts in macroeconomic policies and agricultural trends. The IATRC Grain Embargo study, for example, argued that macroeconomic events were more important than the several agricultural sector explanations of the reversals in trade and farm income trends in 1981. Schuh and Thompson have argued for decades that monetary policy and exchange rates are more important than agricultural policy in determining farm income and its variability. Misunderstanding of the relationship between macroeconomics and the agricultural sector had been, according to both Paarlberg and Schultz, the force behind the genesis of US farm policy, with its emphasis on supply control, during the Great Depression. Recent events have shown the importance of macroeconomic variables in determining commodity prices, as evidenced by the effects of the Great Recession on halting the rapid rise of commodity prices in mid-2008, on the effects of the weak Euro during the European Sovereign debt crisis keeping prices lower, and on the continuing debate on “financialization” of commodity markets. Volatility in the value of the dollar, and the extent of trade and government budget deficits, hold significant implications for the future of farm income.
Despite widespread recognition that the macroeconomic environment matters, agricultural economists have realized limited success in incorporating these issues and ideas into their microeconomic-oriented models and in documenting quantitatively the linkages between macroeconomic and microeconomic phenomena. This mirrors the difficulties economists generally have in explaining exchange rate movements, interest rate differentials, inflationary expectations or income growth, likely the most important linkages between agriculture and the macro economy.

The objectives of this course are to expose students to the nature and importance of linkages between agriculture and the macro-economy, and examine theories and methods that might allow us to establish or quantify these linkages in agricultural models. We will explore extensions of macroeconomic accounting and theory into an open economy, examine attempts by agricultural economists to estimate macroeconomic linkages and build them into commodity models, and consider consequences of implicit and explicit macroeconomic assumptions in much of our work. The changing role of agriculture in an economy under structural transformation will be key to understanding these linkages and how they evolve as economies grow, as shown in several recent developments seeking to explain both recent events and policy history in macro-theoretical frameworks consistent with observed empirical regularities.

Readings:
We will use *Macroeconomics*, 8th edition by Andrew Abel, Ben Bernanke and Dean Croushore (Pearson Addison Wesley, Boston, 2014) as a basic reference (The 7th or earlier editions are sufficient for this course). This will be supplemented by numerous additional readings from books, journals and the press, available from the Reserve Desk of the Parrish (Krannert) Library and/or via links on the class web site. Reading available as pdf documents will also be on S:/Restricted Shared/common/AGEC625 during the first week of class. We will cover during class only a portion of the readings included on this syllabus - one intention here is to include at least introductory readings on the key topics in this area for your future reference. A “*” indicates essential readings. Topics to be emphasized in class and assigned readings will be indicated as the course proceeds - we will begin by following the tentative course outline on the class website.

Website:
The course web site may be accessed via Blackboard Learn by logging in using your career account at:

https://mycourses.purdue.edu/

The Syllabus, Course Outline, and access to most Readings are on the course website. Blackboard is necessary to maintain secure grade information access, as well. Links to lecture notes, homework, supporting spreadsheets, and student presentations are from the course outline on that website. Links to readings and references are from the syllabus. Review questions for this course and old exams may also be accessed at the course website.
Course Requirements, Examinations and Grading:
Grades for this course will be determined from performance on:

- **Final examination (25%)**, 
- **one class presentation (15%)** and 
- **supporting paper (10%)**, 
- **occasional homework problem sets (40%)**, 
- **class participation (10%)**.

The **final** examination will be scheduled during the **week of May 2-7, 2016** (finals week). It will be 2 hours in duration and will cover material from the entire course -- it is a comprehensive examination. Notes, books and handouts will be permitted for the final examination – it is open book and open notes (but no electronic devices). Class presentation topics will be assigned (negotiated) based on student interests. Presentations will review a topic (literature review) rather than cover a single paper, and a written paper (approximately 10 pages) supporting the presentation is required.

**Fine Print** –

**Communication** --Please note that my primary out-of-class method of communication will be via email to your Purdue email address. I will not generally attempt to contact you at email addresses other than your Purdue email address. It is your responsibility to check for mail on a regular basis. I recommend checking your Purdue email account at least once every 24 hours.

**Special Needs** -- If you have a disability that requires academic adjustments, please make an appointment to meet with me during the first week of classes to discuss your needs. Please note that university policy requires all students with disabilities to be registered with Adaptive Programs in the Office of the Dean of Students before classroom accommodations can be provided.

**Academic Integrity**-- University policy on academic dishonesty is clear: academic dishonesty in any form is strictly prohibited. Anyone found to be cheating or helping someone else cheat will be referred directly to the Dean of Students for disciplinary action. Penalties are severe and may include dismissal from the University. The risks associated with cheating far outweigh the perceived benefits. Academic dishonesty includes citing someone else's work as your own or sharing your answers with someone else. If you are unsure whether your planned action constitutes academic dishonesty, seek clarification from your instructor. Other information regarding your rights and responsibilities as a student is contained in the Purdue University Code of Conduct.

**Campus Emergencies** --the unusual event of a major campus emergency, course requirements, deadlines and grading percentages are subject to changes that may be necessitated by a revised semester calendar or other circumstances. To get information about changes in this course, visit the course home page, contact me by email at abottpc@purdue.edu, or call me at my office (494-4944274).
