The Celery Bog revisited

People and Products

Grazing makes personal changes

U.S. Department of Agriculture grantees use grazing to improve the ecosystem in the Celery Bog.

The Celery Bog in West Lafayette is a 103-acre wetland that is home to many species of plants and animals. Grazing, which involves allowing animals to eat grass and other vegetation, is a management tool used to maintain the wetland's healthy ecosystem.

Thousands of dollars in federal funds are being used by the grantees to study the effects of grazing on the bog. The project is expected to be completed in June.

A portion of the Celery Bog is shown in this photo. The 103-acre wetland is located on the campus of Purdue University. It is one of the few remaining wetlands in the area.

City might annex land, make it wetland preserve

The city of West Lafayette is considering annexing land near the Celery Bog and turning it into a wetland preserve.

What's coming

City officials are looking at the possibility of annexing land near the Celery Bog and turning it into a wetland preserve. The land is currently owned by the city and is not being used for any purpose.

City officials say the land could be used for a variety of purposes, including a community garden, a wetland preserve, or even a park.

WXIN sold to corporation in Connecticut

WXIN-TV, Channel 24, has been sold to a corporation in Connecticut.

City officials say the sale is expected to be completed in the near future.

The land near the Celery Bog is located on the campus of Purdue University and is currently owned by the city. It is one of the few remaining wetlands in the area.
