

**Avoid these health pitfalls when bringing your bulls to the IBEP Bull Test!**

Vaccinating with the wrong product;  
Sub-optimal vaccine timing;  
Dam not on Johne's report;  
Testing performed at an unapproved lab

All bulls must be vaccinated with a **Modified Live viral vaccine.**

Acceptable products are:  
Bovi-Shield Gold 5, Vista 5,  
Pyramid 5, and Titanium 5.

If you intend to use a vaccine not listed above as an acceptable product, please contact either Dr. Funnell or Dr. Rusch.

### **Johne's test needed for ALL DAMS!**

Johne's samples need to be processed at an **AAVLD accredited laboratory**. The state diagnostic labs (University labs) are accredited and samples should be sent to these labs for testing. If you have questions about Johne's testing please contact Dr. Funnell or Dr. Rusch.

Bulls need to be vaccinated and boosted prior to delivery to IBEP. The following is an **example** schedule that complies with IBEP rules and maximizes timing for optimal immunity:

**Initial vaccination:** Sept. 28, 2019 to Oct. 1, 2019

**Booster:** Oct. 12, 2019 to Oct. 15, 2019

**Delivery day:** Oct. 29, 2019

Please refer to the test rules for more details

If you have any questions about the health requirements for your bulls, please don't hesitate to contact:
