Module 5-C: Forms for Blood Testing

- This module applies only to individuals who have attended and successfully completed an Indiana State Poultry Association NPIP Blood Testing School Class or County Fair Poultry Superintendents.

Indiana NPIP Forms and Reports

Whenever poultry are shown at exhibitions, such as at a county fair, NPIP forms must be completed to show that the animals are free of disease. Some of the common forms required by the NPIP include:

Flock Selecting and Testing Report - VS Form 9-2
- filled out by an NPIP authorized testing agent, or a certified blood tester
- used by exhibitors to certify that all their poultry to be shown at a public exhibition were tested for pullorum-typhoid disease within 90 days of the show date
- the form includes copies for the ISPA, blood tester (if different than owner), and flock owner within one pad
- this form may also be used to comply with other aspects of the NPIP

County Fair Poultry Exhibitor Form
- filled out by an NPIP authorized testing agent, or a certified blood tester, as an alternative to the VS 9-2
- used by exhibitors to certify that all their poultry to be shown at a county fair came from NPIP-certified Pullorum-Typhoid Clean flocks or were tested for pullorum-typhoid disease within 90 days of the show date
- allows poultry superintendents to easily reproduce the form and make copies of the results

Indiana County Fair Poultry Superintendent Report
- filled out by the poultry superintendent and sent to the Indiana State Poultry Association
- certifies that all poultry shown at the county fair came from an NPIP-certified Pullorum-Typhoid Clean flock or were pullorum-typhoid tested within 90 days

The next three pages contain copies of the forms listed above.
