Research Overview

The Department of Botany and Plant Pathology includes the disciplines of plant biology, plant pathology and weed science. Research in this department addresses both fundamental questions about the biology of plants and their pathogens as well as more applied problems focused on the management and control of weeds and plant diseases.

Anjali Iyer-Pascuzzi is one of the first to examine the molecular processes that underlie infection by soil microbes.

Chris Oakley’s research is driven by understanding the mechanisms of how natural plant populations adapt to local conditions.
