Why is Managing Firewood Movement on State Properties Important?

- There are 140 *known* pests and pathogens that are moved in firewood, many of which are **non-native**.
- There are likely many more **unknown** pests moved with firewood that can cause new problems.
- Damage to forests resulting from introduction of these pests is often **devastating** and **irreversible**.
- It is far better to **prevent** introduction than to manage established pests and diseases in the forest.
- All Indiana citizens and visitors to the state have a responsibility to protect DNR properties from destructive pests.

Some Known Pests and Pathogens Transported in Firewood

Connecticut Agricultural Experiment Stn.

Asian Longhorned Beetle

This beetle has a wide host range, but prefers maple trees. It has caused the destruction of thousands of trees in Illinois, Massachusetts, New Jersey, New York, Ohio and is not easily detected in infested wood.

Hemlock Woolly Adelgid

This insect, imported from Asia, has devastated hemlock forests in Southern Appalachia and threatens several species with extinction.

Spotted Lanternfly

This insect is quickly spreading from the East Coast. It attacks 70+ plants and its eggs are easily transported in firewood.

Penn State Extension

Slide 3

Spongy Moth

Spongy moths (formerly gypsy moth) are a serious problem for many species of trees but especially oaks. They lay their eggs on just about everything. Egg masses are brown and can be difficult to detect on firewood.

Image by Karla Salp, Washington State Department of Agriculture

The Case of Emerald Ash Borer:

A good example of firewood gone bad

Emerald Ash Borer has been moved to many new places with the unwitting help of people, often when they take infested ash firewood to campsites. The insect is now widely distributed in Indiana, threatens extinction of ash trees in our forests, and is costing billions in management.

EAB kills nearly EVERY ash tree that is not protected with pesticides.

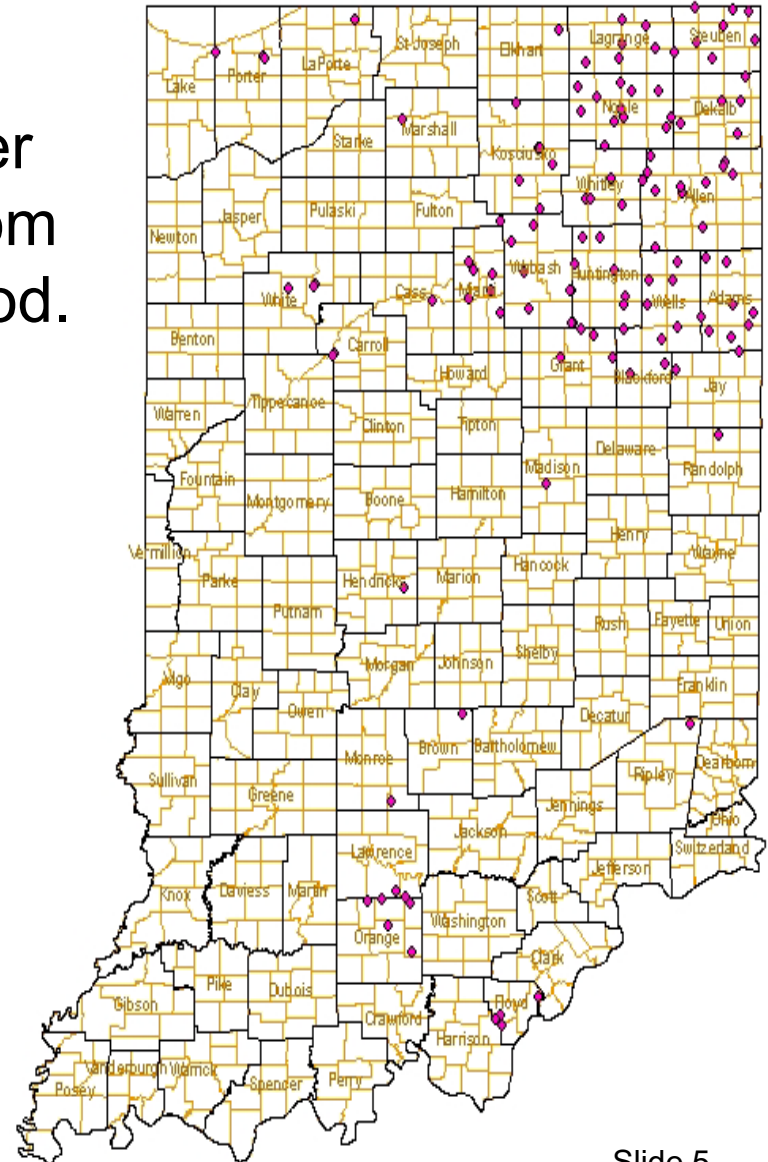

The Case of Emerald Ash Borer:

A good example of firewood gone bad

Red dots indicate known introductions of Emerald Ash Borer in Indiana that directly resulted from movement of infested ash firewood.

This ash tree in an Indiana campground was decimated by EAB.

Problems with Regulating Firewood Movement

1. Laws regarding firewood movement are difficult to enforce.
2. Many people do not know firewood laws or realize the associated risks.
3. EAB only moves $\frac{1}{2}$ mile per year on its own; almost all movement is due to human activity.
4. Firewood is often moved long distances, left behind at campsites, and may even make multiple trips.
5. No place is immune; EAB is found in all counties in Indiana.

The Indiana DNR Firewood Rule for State Parks and Properties:

Rationale:

Management and conservation of the natural and cultural resources of Indiana is central to the mission of the DNR.

Recreational areas are often the first places where invasive forest pests escape into new areas. Therefore, the function of the new rule is twofold:

1. To protect public properties from invasive pests and pathogens.
2. To protect Hoosier forests as a whole by limiting introductions on public lands.

Can Campers Still Enjoy Campfires Without Putting Indiana Forests at Risk?

People may still bring firewood onto DNR properties *if (and only if!)* they follow the firewood rule to make sure the wood is safe.

Firewood brought by campers should be burned completely. They should not leave it for the next camper or take it home with them!

By learning to distinguish safe firewood from unsafe you can help campers ensure they are compliant.

The Firewood Rule:

Formerly a “Policy”, the firewood rule took effect March 17, 2012, and is now enforceable at DNR properties.

Firewood is considered safe to bring onto DNR properties if it meets at least one of the following criteria:

1. Is *kiln-dried*, scrap lumber.
2. Has had *all of its bark removed*
3. Is in a packaged bundle (often purchased from department stores, big box stores, grocery stores, gas stations, etc.) and bears a valid USDA compliance stamp or state level compliance stamp which allows out of state movement.
4. Is purchased from a firewood vendor located near the property who supplies a valid *state compliance stamp*.
5. Is purchased from the property's camp store or from an on-site firewood vendor; this firewood must also bear a state compliance stamp.

We will now discuss each of these in more detail...

1. Kiln-Dried Scrap Lumber

Most insects and pathogens cannot survive prolonged hot temperatures or extremely dry conditions. The process of kiln-drying wood creates both of these conditions, making the wood safe to transport.

**How lumber
is kiln-dried**

**Kiln-dried
lumber has
squared edges
and no bark
remaining**

2. Firewood with ALL bark removed

Ideally, one half inch of the sapwood (the layer of the tree just under the bark) should be removed as well.

Completely removing the part of firewood where most insects and pathogens feed, rest, or reproduce reduces risk.

This process will require extra time and effort on the part of the camper.

Any firewood brought onto the property should be inspected by park personnel during the visit.

3. Firewood purchased in a packaged bundle, bearing a valid compliance stamp from another state Department of Ag or DNR.

Firewood that bears these stamps has been treated in a way approved to eliminate insects and diseases, such as heat treating or fumigation.

Is in a packaged bundle (often purchased from department stores, big box stores, grocery stores, gas stations, etc.) and bears a valid state level compliance stamp which allows out of state movement.

Each state uses a different stamp, but most will include a vendor name and label number. Check the firewood for this information.

Example of a compliance stamp

4. Firewood is purchased from a firewood vendor located near the property and bears a state compliance stamp.

Many firewood vendors near campgrounds and picnic areas have compliance agreements with the Indiana DNR certifying that their firewood is “forest-safe.” These vendors should provide a State Compliance stamp with the firewood.

The date **MUST BE CURRENT** for the agreement to be valid.

 Indiana Department of Natural Resources Division of Entomology & Plant Pathology MCS Auctions DNRP (ES)-54 17 SK 10 Expires: April 2018
This product meets the requirements of the Indiana DNR Property Firewood Rule. (312 IAC 8-1-3 under authority of IC 14-10-2-4 and IC 14-11-2-1) This product is certified for movement ONLY within Indiana. This is NOT a USDA certification
Indiana Department of Natural Resources Division of Entomology and Plant Pathology 402 W. Washington St. Rm W-290 Indianapolis, IN 46204 317-232-4120 DNR website: http://www.in.gov/dnr/entomolo/
 Megan Abraham, State Entomologist

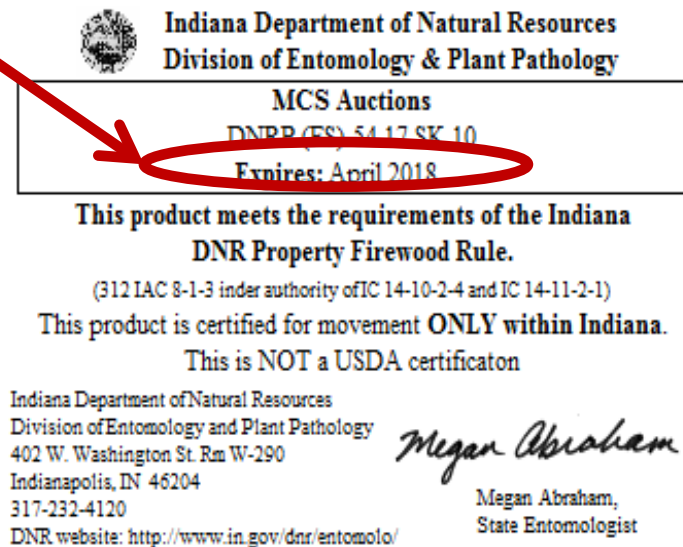

Example of an Indiana State Compliance stamp

5. Firewood is purchased from the property's camp store or an on-site firewood vendor and contains a State Compliance stamp.

Many camp stores on state properties either sell firewood directly to their visitors or have a vendor on site.

Firewood sold in campgrounds must also carry state issued compliance stamps.

The date **MUST BE CURRENT** for the agreement to be valid.

Example of an Indiana State Compliance stamp

A Special Note: Seasoned vs. Unseasoned Wood

Some wood with a compliance stamp will still have bark. This is because it has been approved by an inspector who assures it has undergone proper *seasoning* or other treatment to eliminate pests.

Properly seasoned wood has common characteristics that inspectors look for before issuing a compliance agreement.

Properly seasoned wood will often have cracks in the ends from the drying process

Moisture meters are devices that are used to determine the amount of water in the wood. Properly seasoned wood will have a moisture content of 20% or less.

A Special Note:

Seasoned vs. Unseasoned Wood

Green wood with bark intact is most likely to harbor pests. Seasoning is the process of letting split wood dry out to be burnt the following year. The lower moisture content and aging reduces the likelihood that the wood will carry pests and pathogens.

Properly seasoned wood will:

- Be darker in color than unseasoned
- Be lighter in weight (there is less water in seasoned wood)
- Have cracks in the end grain
- Have bark that has loosened or fallen away from the wood
- Have a moisture content 20% or less
- Be split and allowed to dry out for at least a year

Firewood campers bring from home cannot have bark because there is no way to inspect everyone's wood to ensure proper seasoning.

A Special Note:

Pine and Spruce Firewood

Formerly, pine and spruce firewood was not regulated. Under the new rule, all firewood is regulated, regardless of species. All bark must be removed from coniferous firewood as well.

Photo: Scott Kinzie

EAB in Indiana

Because EAB has been detected in ALL of the counties in Indiana, the DNR has removed its internal restrictions on movement of firewood between counties.

However, the Firewood Rule continues to restrict movement of firewood on state-owned properties.

In a Nutshell:

Help campers remember the
“Three Bs” of firewood:

1. Bring it debarked.

-OR-

2. Buy it stamped.

3. Burn it all!

Rule Enforcement

The primary mission regarding firewood is to protect forests and natural areas through education and friendly enforcement.

Each DNR property is handling firewood checks in locations (gates, campgrounds, etc.) that work best for that site.

1. In some locations, **entrance or campground gate attendants** may be checking if campers have brought firewood.
2. In other locations, **security officers and interpreters** may rove the campground to ensure wood is compliant.
3. In any event, you should be aware of how this is being handled on YOUR property. **Check with your manager if you do not already know.**

However, if campers refuse to comply despite education, the **RULE** allows confiscation of non-compliant wood and issuance of tickets and fines by an Indiana Conservation Officer.

Expectations of Security Officers, Gate and Campground Attendants

It is important to bring the rule to the attention of every camper, even if they do not bring firewood.

Educational Resources:

Rule FAQ More information about the rule can be found at:

<https://www.in.gov/dnr/entomology/regulatory-information/emerald-ash-borer/firewood-rules/>

Compliance Stamp Informational

If firewood is sold on your property, campers are provided with a compliance stamp with the Rule on the reverse.

Firewood on DNR Properties

There are 140 known pests that can be moved in firewood. We all have a responsibility to conserve our Hoosier forests and our campground shade trees, so the DNR has implemented a new firewood property rule this year. We also know how important campfires are to each of you when you camp, so we've included ways that you can still bring firewood in with you.

You can bring firewood from any tree species into a state park, reservoir, state forest or state fish and wildlife area if:

- It is from your home in Indiana and all bark has been removed. (Ideally, remove ½ inch of sapwood beneath the bark, too.)
- It bears a USDA compliance stamp (usually sold at a gas station, grocery, department store, etc.)
- It is purchased from a local firewood vendor outside the property and has a state compliance stamp with it.
- It is purchased from the property campstore or on-site firewood vendor and has a state compliance stamp.

Possession of firewood that does not meet the above standards may result in confiscation or a citation. For answers to frequently asked questions, visit www.firewood.dnr.IN.gov, or email your questions to firewood@dnr.IN.gov. Thank you for following our new firewood rule.

Expectations of Security Officers, Gate and Campground Attendants

It is important to bring the rule to the attention of every camper, even if they do not bring firewood.

Educational Resources:

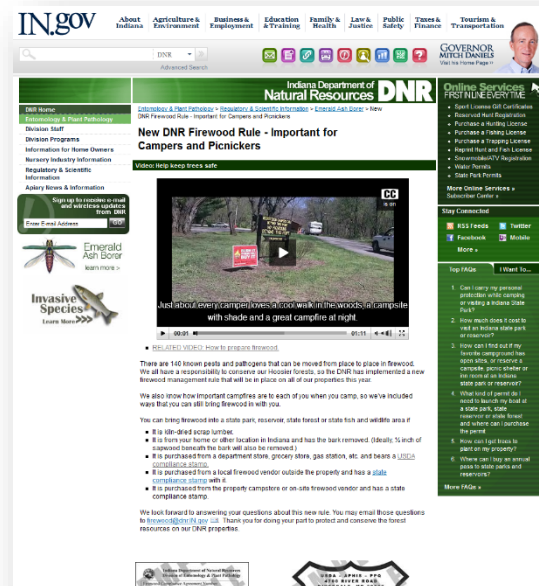

Firewood Website and Email

Answers to more FAQ and information on rule and pests in firewood can be found at:

www.firewood.dnr.IN.gov

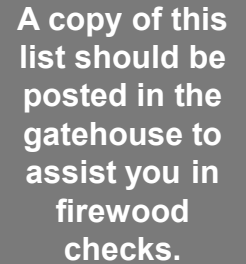

-OR-

firewood@dnr.IN.gov

Expectations of Security Officers, Gate and Campground Attendants

Firewood Checklist:

A copy of this list should be posted in the gatehouse to assist you in firewood checks.

Ask each camper “Did you bring firewood with you?”

- **If NO:** Provide them with information about the rule, tell them that any firewood purchased must have a state or federal compliance stamp, and they should burn all wood completely before they leave.
- **If YES:** Ask if they bought it or brought it from home?
 - ✓ **If they BOUGHT it:** Ask to see a state or federal compliance stamp. If they don't have one the wood can be confiscated, contact manager or conservation officer (CO) if non-cooperative.
 - ✓ **If they BROUGHT it from home:** Is it kiln dried scrap lumber or is the bark removed? If not, it may be confiscated, contact manager or CO if non-cooperative.

Fines and Confiscated Wood

Fines

- Fines may be issued by a CO on the grounds of the Firewood Rule itself (312 IAC 8-1-3) or Indiana Code 14-24-4-4.
- Fines can potentially be up to \$500, plus court costs.

Confiscated Wood

- Any confiscated wood should REMAIN ON THE PROPERTY and be burned immediately, preferably within 24 hours.

Fines and Confiscated Wood

Wood infested with Asian longhorned beetle

Spotted lanternfly egg masses on wood

Confiscated Wood contd.

If wood is confiscated with bark on it, and has evidence of insect or pathogen infestation, you should **HOLD** it and **immediately contact a state compliance officer for inspection.**

Recommend Sources of Safe Firewood

If campers must surrender firewood or have it confiscated, recommend a local source of safe wood.

1. Your property may have a supply of certified wood on hand for exchange.
2. Vendors with a valid state compliance agreement should provide a copy of the compliance stamp with the firewood they sell. For an updated list of compliant vendors visit:
<https://www.in.gov/dnr/entomology/division-staff/>
3. Familiarize yourself with local sources of safe firewood
4. Keep a list of firewood vendors handy to recommend to campers requiring safe wood

Questions You Will Be Asked: And How to Answer Them!!

Brad Bumgardner discusses EAB and firewood with a park visitor at Pokagon.

- There are over 140 KNOWN potential pests and pathogens that can be moved in firewood – this is not just about the Emerald Ash Borer (EAB)
- EAB is a huge problem, and there is the potential for the same thing to happen with other pests and pathogens that we may or MAY NOT know about.
- It is better to be proactive than reactive.

Questions You Will Be Asked: And How to Answer Them!!

“What other pests are in firewood?”

There are many, but the following are of most concern to the DNR: **Asian Longhorned Beetle** kills maples and other tree species and was recently found near Cincinnati, Ohio; **Sirex wood wasp** attacks pines and is now present in New York; **Spongy Moth** can be moved in egg masses laid on firewood and is a quarantined pest in Indiana; several types of **oak borers** girdle and kill oak trees; **Beech Bark Disease** is caused by an insect and fungus working together to kill American Beech trees – it is already killing the beech trees in Michigan’s forests and campgrounds.

Unfortunately, there are many more.

Wasp

Beech Bark
Disease

Questions You Will Be Asked: And How to Answer Them!!

Seasoned firewood with no bark.

“How can I remove the bark from my firewood?”

- Allow wood to season for at least a year in a sunny, well ventilated area.
- Bark on properly seasoned wood often loosens and can be easily removed.
- Bark can also be split off, just as you would split larger diameter pieces to fit into a fire ring.

Questions You Will Be Asked: And How to Answer Them!!

Kiln-drying commercial firewood.

“Why does wood from the camp store or a local vendor or store have bark on it, but mine can’t?”

- Wood from compliant vendors is required to be processed in such a way that ensures pest infestations are no longer a concern.
- This is done by fumigation, proper seasoning, or heat treatment.
- There is no way to ensure that firewood brought in by individual campers meets these requirements.

Questions You Will Be Asked: And How to Answer Them!!

“Firewood sold by local vendors and on properties is expensive and isn’t always the best quality. What can the IDNR do about this?

- We cannot control the pricing structure that local vendors have for their firewood, but we do monitor the wood sold by our local concessionaires who operate camp stores and the wood directly sold by our properties.
- If visitors have concerns about consistent quality or cost of wood, encourage them to email us at firewood@dnr.IN.gov and our concession inspectors can check it.
- **Please reinforce that our intent with this Rule is NOT to create a financial burden on our visitors. *The intent is to honor our mission to conserve and manage our natural and cultural resources so that future generations can continue to enjoy them.***

Questions You Will Be Asked: And How to Answer Them!!

“Can I get a compliance agreement to bring my firewood from home?”

- No. State compliance stamps are only issued to Indiana businesses registered with the Secretary of State and have an active business license.
- DNR does not have the resources to conduct inspections to certify private landowners without firewood business licenses in Indiana.

Questions You Will Be Asked: And How to Answer Them!!

“What will happen if I choose not to follow this rule?”

- Your wood may be confiscated.
- You may be issued a fine if you refuse to comply.
- Citations can carry a fine of \$500, plus court costs.
- You may be ejected from the property.

Remember to be helpful and courteous, but contact the property manager or a conservation officer if you need assistance with a non-compliant visitor.
