

About Forever Young Aquaponics

Forever Young Aquaponics is an innovative agribusiness dedicated to sustainable, high-efficiency food production through aquaponics. We integrate advanced recirculating aquaculture systems (RAS) with deep water culture (DWC) hydroponics to grow high-quality leafy greens while farming premium freshwater fish species in a closed-loop, resource-efficient environment. Our mission is environmentally responsible agriculture that optimizes water usage, reduces environmental impact, and delivers fresh, chemical-free produce to the local markets.

We are currently hiring technician-level professionals to join our operations at our two cutting-edge facilities in Walsenburg, CO, and Jonesboro, GA.

Our Locations

Walsenburg, CO

Our Walsenburg facility is a large-scale aquaponics farm designed for high-efficiency baby leaf production and Rainbow Trout culture. Located in southern Colorado, Walsenburg offers a unique blend of rural charm and abundant outdoor recreation opportunities. The facility will operate under supplemental lighting during the winter months, optimizing controlled-environment farming in aquaponics for year-round production.

Jonesboro, GA

The Jonesboro facility is an advanced aquaponics greenhouse integrated with a recirculating Tilapia farm. Situated just south of Atlanta, this location benefits from proximity to a major metropolitan area while maintaining a focus on nature synchronized cultivation. Jonesboro is an emerging hub in southern Atlanta, offering a dynamic environment for professionals passionate about launching their career in sustainable agriculture.

We are looking for motivated individuals eager to gain hands-on experience and grow with our firm as exponents in aquaponics, greenhouse operations, and freshwater aquaculture systems.

-
- 1. Aquaculture Technician (1) – Walsenburg, CO (Rainbow Trout)**
 - 2. Aquaculture Technician (1) – Jonesboro, GA (Tilapia)**

Job Summary:

We are seeking an Aquaculture Technician to support daily operations at our Walsenburg facility, specializing in Rainbow Trout production within an integrated aquaponics system. The technician will assist with fish husbandry, water quality monitoring, system maintenance, and harvest operations to ensure optimal fish health and system efficiency.

Key Responsibilities:

Monitor fish health, growth rates, and feeding schedules.

Conduct routine water quality testing and system adjustments.

Perform stocking, grading, and harvesting.

Maintain and troubleshoot RAS components, including pumps, filters, and aeration systems.

Keep detailed records of water parameters, fish health, and feed usage.

Follow biosecurity and safety protocols.

Qualifications:

Experience in aquaculture, fisheries, or related fields preferred specific to species.

Knowledge of RAS and water quality management is a plus.

Ability to perform hands-on tasks in a fast-paced environment.

Willingness to work flexible hours, including weekends if needed.

-
- 1. Greenhouse Technician (4) – Walsenburg, CO (DWC, Leafy Greens)**
 - 2. Greenhouse Technician (8) – Jonesboro, GA (DWC, Leafy Greens)**

Job Summary:

We are seeking a Greenhouse Technician to support the production of leafy greens in a Deep Water Culture (DWC) aquaponic system at our Walsenburg facility. The technician will be responsible for crop monitoring, nutrient management, disease prevention, and greenhouse system maintenance. This role requires a solid understanding of plant life cycles, horticultural best practices, and environmental controls to optimize year-round production.

Key Responsibilities:

- Monitor and manage the growth stages of leafy greens in a DWC system.
- Identify and address plant health issues, including nutrient deficiencies and diseases.
- Assist in maintaining optimal environmental conditions (humidity, temperature, lighting).
- Develop and refine SOPs for greenhouse operations, crop care, and system maintenance.
- Conduct water quality testing and adjust nutrient levels accordingly.
- Performing transplanting, harvesting, and post-harvest handling of crops.
- Maintain records on crop performance, pest management, and environmental conditions.
- Ensure compliance with biosecurity and food safety protocols.

Qualifications:

- Experience in hydroponics, aquaponics, or controlled-environment horticulture preferred.
- Knowledge of plant nutrition, disease prevention, and integrated pest management.
- Familiarity with DWC systems and water chemistry is a plus.
- Strong problem-solving skills and ability to follow best practices.
- Willingness to work in a greenhouse environment with varying conditions.
