

Xperience Ag out of Greensburg, Indiana has two internship opportunities coming up for the summer of 2024 – a Precision Agriculture Internship and a Drone Applicator Internship.

The **Precision Agriculture Internship** will focus on exposure in precision technology installs, service calls, and sales as well as some insight on data management and government programs for farmers. This internship is a great opportunity to get hands on experience with many different products in precision agriculture that we are dealers for, including Ag Leader, Precision Planting, Harvest International, Capstan, and many more.

The **Drone Applicator Internship** is focused on spraying fields using our drones **and will require certifications before the season starts**. Since the drone season focuses on fungicide applications for growers, this internship will only last from the beginning of July to the end of August. This internship would be great for someone who is passionate about drones and is willing to work hard to complete the job on time.

Interested students should send a resume to or contact Emma Nobbe, a recent Purdue Agricultural Systems Management graduate.
