

International Natural Resource Issues in Sweden and Norway

In Summer 2024, course will be held in Sweden and Norway (July 1 – July 26).

Purdue contacts: Dr. Tomas Höök, thook@purdue.edu
Dr. Doug Jacobs, djacobs@purdue.edu

In this course, we will examine natural resources broadly defined, including fisheries, forestry, wildlife, agriculture, mining, outdoor recreation, and urban sustainability. During four weeks we define, discover, and document examples where sustainability of resource use matters. The course explores the effect of terrain, marine dynamics, climate, vegetation, faunal assemblages, social structures and technologies on natural resource use. The course is a collaboration of Purdue University and North Carolina State University. Students from both universities work together to explore issues in resource management.
