Plant Health Analytics Field Associate – Working for AgCall On Behalf of a Major Ag Chemical Manufacturer

The Field Associate will be responsible for collecting up to 2 tissue samples from 5-30 different corn fields in a defined area during the V5 and Vt stages of the corn growth phase. Areas will be available from central Nebraska to eastern Ohio and from Southern Minnesota to Southern Illinois. It will be important that the individual be available during the mid-day time frame to collect these samples and on the same day of the sampling ship the samples overnight to a defined laboratory.

A personal mobile Apple device utilizing iOS software will be used to locate specific locations in the corn field for sampling, uploading plant health statistics, date and time specifics, uploading photos and communicating the completion of the sampling phase. Associate needs to be comfortable with going into corn fields, managing daily deadlines for shipping and collection.

Overall this project may take up to 5-7 part-time days in total to complete the collection of samples. Samples should be expected to be collected Monday – Thursday due to sample shipping requirements.

Training for this project will be conducted via WebEx on a day in early to mid-May. Sampling will start late May and should be concluded before the middle of August. Mileage will be paid for travel.

Please submit your application prior to April 27, 2018. This position will be filled by May 1st, 2018.
