Summer Field Intern
Clunette Elevator Inc. – Leesburg, IN

Our field interns are the company’s eyes and ears when it comes to weed management, diseases and integrated pest management, and any other major problems that may occur within the fields. They are responsible for reporting any problems and any areas of concern. Assigned acres are scouted on a two week cycle. All trips are recorded on an iPad using a scouting software we helped to develop. This software puts us on the cutting edge of agronomic technology and brings great resources to our growers. Other responsibilities may include nematode sampling, tissue sampling, analysis of thermal imaging, and help with the several research plots and trials we set up.

Time Line

Interns will start when school releases for the summer and will work until August. Typical work hours are 40 hours a week with the potential for extra hours depending on the weather and certain growth periods. Vehicles and iPads are provided. Adhering to our scouting policies and protocols is required.

Requirements

- Able to walk 5 plus miles a day in all weather and environmental conditions.
- A valid driver’s license is required.
- An interest in agriculture and the desire to learn.
